A Scientific Mentorship Program initiative started in Moi University in 2007 and later University of Eldoret has now moved to the national level through the support of the Kenya Education Network (KENET) with a focus on graduate students as well as young faculty who have attained PhD within the last 5 years in the areas of fundamental and applied research in materials science related themes that address aspects of the big 4 agenda and other related goals of national interest.

I work as a Research Associate of a Kenyan special interest group on Computational Modeling and Materials Science on studies of the properties of materials for energy conversion and environmental applications involving collaboration the experimental aspects in these areas. These efforts will support a multidisciplinary approach to the existing potential of studying complex physical, chemical and biological systems, among others, that characterize current and emerging challenges in our society.
